TECHNICAL DETAILS

THERMO SHIELD

The construction of the Thermo Shield Panels are fundamentally rigid PUCore of 40 +/-2 Density with facings of generally pre painted high strength Galvalume sheets. Panels are moderately thick and light in weight which has sufficient solidness and load bearing capacity to be used for partition walls and roofs.

Metal-faced polyurethane sandwich panels are the system of choice of today for large **industrial buildings refrigerated warehouses, office blocks, exhibition halls, fair pavilions, schools and sports halls.**

Polyurethane sandwich panels come complete with specially formed tongue-and-groove joints ensuring a perfect fit and maximum integrity, Assembly is fast, easy and cost effective.
